

Every small conservation act counts!

Instead of disposing old plastic bottles in the recycling bin, Ms. Siddhi Humbe from Khopoli reused them to plant indoor and outdoor plants and used them as vases. It not only conserves natural resources but reduces the ecological footprint as well.

Simple yet effective!

Co-existing begins with compassion for nature!

While out for routine inspection at Stn-A(Trombay division) towards Tata Store Road our QRT team S/Sup. S.S. Gaikwad with S/gd. V.D. Munghse saw two monkeys stuck in the net below the conveyor belt. They were struggling to set themselves free. The QRT team immediately informed DSO Gyanendra Rathore & got down to help free the monkeys.

Recycling scrap tower angles to construct 9x6 metre shed!

To maintain the healthiness & service worthiness of costlier equipment, it is important to store these in a safe indoor space, protected from dust & rainwater. It was decided to build a shed to store the distribution division inventory worth Rs. 40 crores, however the estimated cost of construction was exceeding the budget.

Our internal team decided to reuse the dismantled scrap tower angle at Sarsola and used it in the shed construction work. By doing so, they managed to save approximately Rs. 3.75 lac.

Benefits

- Effective use of scrap and the area occupied by scrap.
- Cost saving Rs. 3.75 lac.
- Safe indoor storage for spares like electronic devices like RTU cards, relays, RMU and Breaker Motors etc.
